Projected drug price inflation July 1, 2024 through June 30, 2025

This is our highest projected inflation rate since the July 2019 edition (January 2020 – December 2020 prediction window)

Several factors drive the trend of increasing inflation:

- Increase in specialty and ultra-specialty approvals
- Additional indications for previously approved medications, increasing utilization
- Products with higher-than-customary price increases
- Payer restrictions influencing site of care and class of trade implications for pharmacy services

Vizient Pharmacy Analytics

With daily data feeds from 20+ distributors, Vizient pharmacy insights begin with visibility into \$130B+ in member spend (GPO eligible, 340B and WAC) across acute and non-acute care settings
